Competitor Field Study: Team Deliverables

Team deliverables in this file (slide 29)

Deliverable	Who	Contents	Status
1. Evidence log	Team	One row per interview or teardown	9 rows: interviews I-01 to I-04 (E-01 to E-04), teardowns E-05 to E-07, public artifacts E-08 and E-09
2. Competitive Landscape	Team	Map, comparison table, ranked switching triggers	Map, comparison table and 15 ranked switching triggers, from I-01 to I-04, the teardowns and the public pages
3. Change note	Team	What changed in the business case, and why	3 changes, each with evidence IDs and the team's rationale
4. Candidate risk entries	Team	1 to 3 risks with trigger, owner and mitigation	3 candidates, each with trigger, proposed owner, mitigation and evidence IDs

Individual deliverables (field notes and contradiction memo) are submitted separately by each member.

Field week requirements checklist (slides 21, 27)

- Yes 3 interviews done (ideally together), about 15 minutes each. Done: I-01, I-02, I-03, I-04
- Yes At least one interviewee is a FORMER user of a competing solution (I-02 is a former Facebook Events user, now on Eventbrite; I-03 stopped using FitFam as a main source)
- Yes All interviewees from outside the course; nobody from our team
- Yes At least 3 competitors profiled, covering at least two types (direct, indirect, status quo). Done: DICE and Eventbrite (direct), Instagram (indirect), the status quo column; E-05 to E-09
- Yes One 30-minute teardown per competitor (own account, public product, no scraping). Done 18 October: DICE (E-05), Eventbrite (E-06), Instagram local event accounts (E-07), by Jazmin
- Yes Interviewees logged by code, never by name; recorded only with a yes

1. Evidence log

One row per interview or teardown. Tiers: 1 = first-hand behavior (our interviews, our teardowns); 2 = public artifacts (cite URL and access date).

ID	Date	Source	Tier	Collected by	Competitors	What we observed (key behavior)	Reference
E-01	10/16/2026	Interview I-01 (current user)	1	Jazmin & Emmanuel	Instagram, DICE, Eventbrite, Ticketmaster, Visit El Paso, friends/flyers	Bought Rhinos tickets on Ticketmaster the day before. Mostly finds events passively on the Instagram feed (local venues, roundup pages, friends' reposts), then forwards flyers to friends to plan. Uses DICE for DJ events and Eventbrite only for city events. Reaches Visit El Paso only from a flyer, never browses it.	Interview1_Transcript
E-02	10/13/2026	Interview I-02	1	Samuel Alderete & Christian Lopez-Matulessy	Eventbrite (weekly); Facebook Events (former, app deleted); Ticketmaster; Google; Instagram; TikTok (roommate)	On Sunday opened Eventbrite, searched El Paso for a low-cost activity with a roommate, filtered to free events and found a workshop for the next Saturday. The listing did not say who it was for, so opened the organizer's social page before registering on Eventbrite. Opens Eventbrite about weekly; stopped checking Facebook Events about six weeks earlier and deleted the app because the feed was cluttered. Ticketmaster only when a specific concert is already known. About 15 minutes a week browsing, 45 when planning for friends; pays nothing for discovery.	Field notes, Samuel Alderete, I-02 (verified interview sheet)
E-03	10/13/2026	Interview I-03 (former FitFam user)	1	Samuel Alderete & Christian Lopez-Matulessy	Instagram organizer pages; FitFam (former main source); Facebook groups; Google	Last Friday opened a venue's Instagram page after a friend mentioned a car meet, checked the flyer and the comments to confirm it was still on. The meet had moved to another lot, but the original post was the one being shared. Texted friends the new address; two friends drove to the old location first. Stopped using FitFam as a main source a couple of months ago because event posts were buried among other content; now goes straight to organizer pages, but has not unfollowed FitFam. About 10 minutes a week if looking for something specific, closer to an hour for something new; pays nothing for discovery.	Field notes, Samuel Alderete, I-03 (verified interview sheet)
E-04	10/12/2026	Interview I-04	1	Oscar Vargas	Instagram, FitFam, Eventbrite, Facebook Events, Google	Two weeks ago, looked for a Saturday night plan with roommates. Found a food truck festival on Instagram, saved and shared it, then spent 15 to 20 minutes checking for nearby parking, hours and attending vendors across scattered pages and comments. Mostly uses Instagram e.g. FitFam, etc. (events get	Transcript I-04

						buried by newer posts); Eventbrite only occasionally. Tried Facebook Events and Google; Facebook felt less active for students. Browses 30 to 60 minutes a week; pays nothing. Would switch to one app that collects events and filters by interest.	
E-05	10/18/2026	Teardown: DICE	1	Jazmin	DICE	You first log into the app or create an account: 5 mins (if you create an account) Pricing: free to browse, you have to pay if you want to buy tickets, ranging from $20+ each ticket, depending on the event. Points of hesitation: since its a newish app, I felt hesitant about the tickets being real, not a scam.	Easy and straight forward to use, would say from logging in to buying tickets it would take 15 to 20 mins.
E-06	10/18/2026	Teardown: Eventbrite	1	Jazmin	Eventbrite	You first log into the app or create an account: 5 mins (if you create an account) Pricing: free to browse, you have to pay if you want to buy tickets; they offer free events too! Points of hesitation: none, I guess this varies from event to event, but sometimes the details of the event aren't clear enough.	Easy and straight forward to use, would say from logging in to buying tickets it would take 15 to 20 mins.
E-07	10/18/2026	Teardown: Instagram (local event accounts)	1	Jazmin	Instagram	You first log into the app or create an account: 10 mins (if you create an account) Scroll through the app, I have a very curated feed too, so it took me like 3 mins to find a flyer for an event. Points of hesitation: making sure that the event will actually happen by looking at the organizers' stories and stuff.	Very easy, but I have a very curated feed and that made it way easier, 10 mins tops. For a new user I think it would take at least an hour, so that they can find pages to follow, figure out how to look for stuff,

							etc.
E-08	10/19/2026	Public artifact: Eventbrite organizer pricing page	2	Jazmin	Eventbrite	Free events have no fees ("Publish unlimited free events at no cost"). Paid tickets add a 3.7% + $1.79 service fee per ticket and 2.9% payment processing per order; fees are paid by buyers by default unless the organizer absorbs them.	eventbrite.com/organizer/pricing, accessed 10/19/2026
E-09	10/19/2026	Public artifact: DICE App Store listing	2	Jazmin	DICE	Free app. Claims full prices shown upfront with "no surprises at checkout" and no resellers. Discovery through nearby-event alerts, a home feed, Spotify/Apple Music taste matching, and following friends, artists and venues. Face-value waiting list for sold-out shows; ticket transfer between friends. Users say that refund rules vary by promoter.	apps.apple.com/us/app/dice-live-shows/id898358948, accessed 10/19/2026

2. Competitive Landscape

2a. Competitor map

Three columns, one per competitor type (slide 13). The status quo gets its own column (slide 14).

Direct Another product, same job	**Indirect** Different kind of product, same job	**Status quo** No product, only a habit or workaround
DICE: app listing El Paso events, mainly DJ/music (E-01) Eventbrite: used only for city-run events by I-01 (E-01) Visit El Paso website: reached only from a flyer (E-01) Facebook Events: former source for I-02, recommended events through friends, dropped when the app was deleted; Eventbrite as a weekly first stop with a free-event filter and registration (E-02). Facebook Events felt less active for students (E-04)	Instagram: local venue accounts, roundup pages (e.g., El Paso Upcoming, Hotspots), Visit El Paso and El Paso Official accounts (E-01) Ticketmaster: ticketing, used rarely (E-01) Google searches when a specific event is in mind; TikTok, where I-02's roommate finds pop-ups that are not on ticket sites (E-02) FitFam (Instagram page): former main source for I-03, event posts buried among other content (E-03); still a starting point for I-04 (E-04) Instagram organizer pages: post updates first, so I-03 goes there directly (E-03) Facebook groups: used for car meets, cover little else (E-03)	Seeing flyers on the feed, on campus or downtown, and forwarding them to friends (E-01) Friends' reposts and stories (E-01) Planning together in group chats (E-01) Checking a post's comments to confirm an event is still on, then texting friends the new address (E-03) Saving and sharing a post with roommates, then checking parking, hours and vendors across several pages (E-04)

Assumption: Each direct app covers one kind of event (DICE for DJ and music nights, Eventbrite for registration and city events), so none is a full El Paso/Juárez calendar. Test in E-05 and E-06: of one weekend's events found on the Instagram roundup pages, count how many also appear on DICE and on Eventbrite.	Assumption: Organizers post and update on Instagram first, so any listing we build is downstream of it and goes stale unless it links back. Test in E-07: for 10 events seen on roundup pages, record whether the time or place changed after first posting and where the change appeared first.	Assumption: The status quo is cheap at finding events and costly at confirming details and coordinating. Test in the next interviews: for the last plan that went wrong, record the minutes spent confirming details and whether anyone missed the event or went to the wrong place suggesting misinformation about an event.

2b. Comparison table

Fill one column per competitor profiled. Interview cells are Tier 1 (E-01 to E-04). Pricing, coverage and limits come from teardowns (Tier 1) or public pages (Tier 2).

	DICE	Eventbrite	Instagram	Status quo (flyers + friends)
Type	Direct	Direct	Indirect	Status quo
Job it does for the user	Lists El Paso events in one place, mainly DJ/music (E-01)	Sells tickets for city-run events such as the holiday downtown rides (E-01)	Shows local events on the feed from followed venues and roundup pages (E-01)	Friends share flyers; plans are made together (E-01)
How the user finds events	Opens app, sees all El Paso events at once (E-01) Nearby-event alerts, a home feed, Spotify/Apple Music taste matching, and following friends, artists and venues (E-09, Tier 2)	Linked from the event/city post (E-01)	Passive: appears on feed; cannot search "events this weekend" (E-01)	Flyer seen anywhere, forwarded to friends (E-01)
Cost to the user (money/time)	Free app; claims the full ticket price is shown upfront with no checkout surprises (E-09, Tier 2). Time: 15-20 mins (E-05) Paid tickets from about $20 each, depending on the event (E-05)	Free to browse and register, no subscription; about 15 minutes a week, 45 when planning for friends (E-02) Paid tickets carry a 3.7% + $1.79 service fee per ticket and 2.9% payment processing per order, paid by the buyer by default (E-08, Tier 2). About 15 to 20 minutes from logging in to buying a ticket (E-06)	Free; under 5 seconds per flyer, per I-01 (E-01); 30 to 60 minutes a week browsing, per I-04 (E-04) About 3 minutes to find a flyer with a curated feed; likely an hour or more for a new user who first has to find pages to follow (E-07)	Free; days of planning back-and-forth (E-01); 15 to 20 minutes confirming details for one event (E-04)
Local coverage	Grew from almost no El Paso events to many (E-01).	Free-event filter surfaces free workshops; small pop-ups are	Depends on accounts followed and the algorithm (E-01)	Depends on friends' feeds (E-01)

		found on Instagram or TikTok instead (E-02) Organizers can publish unlimited free events at no cost (E-08, Tier 2)		
Weakness we observed	Refund and return rules vary by promoter, per an App Store review (E-09, Tier 2). Felt hesitant about the event and tickets being real, since its a very new app, it has a different UI, very cool. (E-05)	The listing did not say who the workshop was for; the user left to the organizer's social page before registering. Would leave over cancellations without updates or sponsored, irrelevant results (E-02) Event details are sometimes not clear enough (E-06)	Easy to miss events; hard to search on demand (E-01). Event posts get buried by newer posts (E-03, E-04). The original post kept circulating after the location changed (E-03) Had to check the organizer's stories to make sure the event would actually happen (E-07)	Events missed if nobody shares them (E-01). Friends holding the old flyer went to the wrong location (E-03)
Evidence IDs	E-01, E-05, E-09	E-01, E-02, E-04, E-06, E-08	E-01, E-02, E-03, E-04, E-07	E-01, E-03, E-04

2c. Switching triggers

Observations from I-01 to I-04. Rank them now that all interviews are in (1 = strongest across interviews). Rows marked Opinion are stated future behavior and cannot move a business case number on their own (slide 24). Ranked 19 October: 1 = heard as behavior in the most interviews, or with a real cost (a wasted trip, minutes spent confirming details); single-interview pulls and habits next; the opinion row last.

Force	What we heard	Supports	Evidence	Rank
Push (problem today)	Cannot ask Instagram for "all events this weekend"; has to remember which pages to check	Our app	E-01	7
Push	Sometimes finds out about an event two days after it happened	Our app	E-01	8
Push (problem today)	Facebook feed cluttered with unrelated posts; stopped keeping up and deleted the app. Had to leave an Eventbrite listing to learn who the workshop was for	Our app	E-02	6
Push (problem today)	The car meet moved, but the original flyer kept being shared; two friends drove to the old location first	Our app	E-03	4
Push (problem today)	Event announcements buried among other FitFam posts; stopped using it as a main source	Organizer pages / our app	E-03, E-04	3
Push (problem today)	Spent 15 to 20 minutes checking parking, hours and vendors across scattered pages and comments	Our app	E-04	5
Pull (new solution)	DICE: open the app and instantly see all El Paso events	DICE / our app	E-01	11

Pull (new solution)	Eventbrite: free-event filter and easy registration; found a free workshop for the next Saturday	Eventbrite / our app	E-02	9
Pull (new solution)	Organizer pages post updates first, so went straight to venue pages	Organizer pages	E-03	10
Pull (Opinion)	Would switch to a calendar that pulls from official organizers and shows every change (E-03); would consider one app that collects events and filters by interest (E-04)	Our app	E-03, E-04	15
Habit (present)	Feed is already full of El Paso accounts; friends repost; says Instagram has "gotten way better" and would not stop using it	Status quo / Instagram	E-01	1
Habit	Event discovery takes under 5 seconds per flyer; the effort is in planning with friends, not finding	Status quo	E-01	13
Habit (present)	Opens Eventbrite at least once a week; Eventbrite first for events with registration, Instagram for small local activities	Eventbrite	E-02	12
Habit (present)	Has not unfollowed FitFam (E-03); starts each search on Instagram and FitFam (E-04)	Instagram / FitFam	E-03, E-04	2
Anxiety (new solution)	Thought Eventbrite was only for paid tickets until finding the free filter; for any new tool, would leave over listings canceled without updates or everything turning sponsored and irrelevant	Status quo	E-02	14

3. Change note

What changed in the business case, and why. One row per change, each tied to evidence IDs.

Business case item	Before	After	Evidence IDs	Why (team writes)
Problem statement	Help El Paso/Juárez residents find events in time to plan and attend.	Help residents find events and confirm the details they need before registering or traveling.	E-02, E-03	Both participants found an event, but finding it did not give them everything they needed. The workshop participant checked another page before registering. The car-meet participant found a location change, but two friends still went to the old location.
Features in the slice	A centralized event calendar with upcoming events and a feed personalized by interests.	Keep these features and add clear attendance requirements, links to official organizer information, and visible location	E-02, E-03	A larger event list would not have answered the workshop participant's question about prior experience or corrected the old

		or cancellation updates.		flyer being shared for the car meet. These details should be part of the listing people use to make plans.
Validation plan	Check whether users can discover relevant events through the calendar and feed.	Also test whether users can confirm attendance requirements and the current location without checking another source. Record extra source checks and any use of an outdated address.	E-02, E-03	We need to test whether clearer listings and updates improve the actual planning process. These interviews support testing those changes, but they do not establish higher adoption or revenue.

4. Candidate risk entries

1 to 3 risks for the Sprint 3 risk register (slide 25). The status quo is probably the first row (slide 33).

Risk	Trigger	Proposed owner	Mitigation	Evidence IDs
Event-goers keep relying on their Instagram feed and friends' shares instead of adopting the app (status quo inertia)	In the validation test, fewer than 3 of 5 participants open the app unprompted in week 2, or more than half say they found their last event through the Instagram feed or a friend's share.	Jazmin Huerta, Market Research Lead (proposed)	Do not compete with the feed for discovery. Make every listing a reference of the Instagram stories and group chats, where plans are already made (E-01), and lead with what the feed lacks: current time, place and changes in one place (E-03, E-04).	E-01, E-03, E-04
Listings go out of date (location changes, cancellations) and users fall back to organizer pages for the current details	A weekly audit of 20 listings finds more than 2 (10%) whose time, place or status differs from the organizer's own page, or any pilot user reports going to an outdated address.	Oscar Vargas, Business Strategy Lead (proposed; already owns the event-supply assumption in the budget)	Link every listing to the organizer's official page and show a "last confirmed" date; let organizers mark a change or cancellation. Covered by the 5 team-hours a week curation line in the budget ($16,024 a year); if the audit needs more, it draws on the event-supply-shortfall contingency.	E-02, E-03
Eventbrite already covers registration-based and free events, so those users have less reason to switch	In teardown E-06, more than half of one weekend's registration-based or free El Paso events found elsewhere are already on Eventbrite with the details users need (who, place, time).	Emmanuel Saenz, Project Manager (proposed; owns the slice scope)	Position alongside Eventbrite, not against it: link out to Eventbrite for registration rather than rebuild it (ticketing is not considered in the slice), and aim coverage at the small local events I-02's roommate finds on Instagram and TikTok that are not on ticket sites (E-02). If the trigger fires, we will revisit the slice boundary before the Sprint 3 estimate.	E-02, E-04
